

High quality child care looks like

MATH.

Children learn by doing. They learn best when they are having fun.

Babies learn math concepts in songs and rhymes.

Toddlers develop the skills to understand math through play. Blocks and balls are their tools.

Play grocery shopping gives meaning to numbers. Pretend cooking teaches measurement and order of events.

Quality child care uses these activities and more to help your child learn about math. Visit our website to find quality child care near you.
